

**Table of Loci for Traits in Grapevine Relevant for Breeding and Genetics:**

Associated markers, their chromosomal localisation, and the donor genotype/species are given. Chromosomal position of a trait/allele is given in megabases according to the 12 x genome sequence of PN40024 (<http://www.genoscope.cns.fr/vitis>).

**Update: February 18, 2022**

The symbols were discussed and assigned at the International Conference on Grapevine Breeding and Genetics at Geneva, August 1 - 5, 2010. Follow up information on naming of loci will be provided on VIVC to avoid homonyms.

For updating information please contact: reinhard.toepfer@julius-kuehn.de or ludger.hausmann@julius-kuehn.de.
